

MSHA
HEARING PROTECTOR
FACTOR LIST
JUNE 2009

NOTE

The Hearing Protector Factor List provides only an approximation of the dBA noise reduction offered by the hearing protector. Those hearing protectors which were tested according to the American National Standards Institute (ANSI) Test Method ANSI S-12.6-1984 are designated by (XX) after the model: Hearing protectors tested according to the early ANSI S-3.19-1974 method are designated by (X), while hearing protectors tested according to the oldest method, ANSI Z24.22-1957, are unmarked. The testing procedures differ among the three methods and the results for a given hearing protector may vary. Because of this, a comparison of the factor for a hearing protector tested

MSHA HEARING PROTECTOR LIST - JUNE 2009

under the 1957 method should not be made with factors obtained under the 1974 and 1984 methods:

It is noted that the Environmental Protection Agency (EPA) has not updated its document for calculating the NRR Value to include the ANSI S-12.6-1984 standard data. Therefore, the majority of the values in this list reflect results obtained through the older ANSI S-3.19-1974 standard.

Also, please note that the list contains some hearing protection devices that are no longer manufactured. However, because these devices may remain available to the mining community through retail stores and other outlets, they are included in this list.

The NRR Value in this list may vary slightly from the manufacturer's value. If this occurs, the LARGER NRR Value should be used.
