PIPE SAFETY

Keep out of the danger zone

Since 2007, five miners died as a result of pipe related accidents at Metal and Nonmetal mines.

Best Practices

• Establish and discuss safe work procedures. Identify and control all hazards associated with the work to be performed along with the methods to properly protect persons.
• Task train all persons to recognize all potential hazardous conditions and to understand safe job procedures for elimination of the hazards before beginning work.
• Securely block equipment against hazardous motion while performing work.
• Implement measures to ensure persons are properly positioned and protected from hazards while performing a task.
• Monitor personnel routinely to determine that safe work procedures are followed.

Take a Moment for a Lifetime of Moments
