Two separate and distinct escapeways are not being provided off the TG 22 (029/MMU) on 03.01.2010. A stopping (near spad 24043) to separate the Alternate and Primary escapeway is missing. A roof fall occurred in the #2 entry. Both the escapeways off the TG 22 would be filled with smoke and/or noxious gases if a fire occurred outby the missing stopping. This is a highly dangerous condition. Two separate and distinct escapeways is one of the most important requirements for safety, in underground mining, to allow miners inby an escape route, in the event the other is contaminated or blocked. because two distinct and separate escapeways were not being provided.
