Unemployment Insurance (OUI) to determine workload counts for allocation of administrative funds, to analyze the ratio of disqualifications to determinations, and to examine and evaluate the program effect of nonmonetary activities.

II. Desired Focus of Comments

Currently, the Employment and Training Administration is soliciting comments concerning the proposed extension collection of the ETA 207, Nonmonetary Determinations Activities Report. Comments are requested to:

- Evaluate whether the proposed collection of information is necessary to assess performance of the nonmonetary determination function, including whether the information will have practical utility;
- evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- enhance the quality, utility, and clarity of the information to be collected; and
- minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.

III. Current Actions

The continued collection of the information contained on the ETA 207 report is necessary to enable the OUI to continue evaluating state performance in the nonmonetary determination area and to continue using the data as a key input to the administrative funding process.

Type of Review: Extension without change.

Agency: Employment and Training Administration (ETA)

Title: Nonmonetary Determination Activities Report

OMB Number: 1205–0150

Agency Number: ETA 207

Affected Public: State Workforce

Agencies

Total Respondents: 53

Frequency: Quarterly

Total Responses: 53 respondents × 4 responses per year = 212 responses for the regular program, 53 respondents × 4 responses per year = 212 responses for the Emergency Unemployment Compensation 2008 program, 53 respondents × 4 responses per year = 212 responses for the Federal-State extended benefit program for an estimated total of 636 responses.

Average Estimated Response Time: 4 hours per response

Estimated Annual Burden Hours: 2,544 hours

Total Burden Cost (capital/startup): $0

Total Burden Cost (operating/maintaining): $0

Comments submitted in response to this notice will be summarized and/or included in the request for Office of Management and Budget approval of the ICR; they will also become a matter of public record.

Signed in Washington, DC on this 17th Day of June, 2013.

Geri Fiala,

 Acting Assistant Secretary, Employment and Training Administration.

BILLING CODE 4510–FW–P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

Proposed Information Collection; Application for a Permit To Fire More than 20 Boreholes and/or for the use of Nonpermissible Blasting Units, Explosives, and Shot-Firing Units; Posting Notices of Misfires

AGENCY: Mine Safety and Health Administration, Labor.

ACTION: Request for public comments.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and continuing collections of information in accordance with the Paperwork Reduction Act of 1995 [44 U.S.C. 3506(c)(2)(A)] (PRA). This program helps to assure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed.

Currently, the Mine Safety and Health Administration (MSHA) is soliciting comments concerning the proposed extension of the information collection related to Application for a Permit to Fire More than 20 Boreholes and/or for the use of Nonpermissible Blasting Units, Explosives, and Shot-firing Units; Posting Notices of Misfires. MSHA is particularly interested in comments that:

- Evaluate whether the collection of information is necessary for the proper
performance of the functions of the agency, including whether the information has practical utility;
• Evaluate the accuracy of the MSHA’s estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;
• Suggest methods to enhance the quality, utility, and clarity of the information to be collected; and
• Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

OMB clearance requests are available on MSHA’s Web site at http://www.msha.gov under “Federal Register Documents” on the right side of the screen by selecting “New and Existing Information Collections and Supporting Statements”. The document will be available on MSHA’s Web site for 60 days after the publication date of this notice, and on http://www.regulations.gov. Because comments will not be edited to remove any identifying or contact information, MSHA cautions the commenter against including any information in the submission that should not be publicly disclosed.

The public may also examine publicly available documents at MSHA, Office of Standards, Regulations, and Variances, 1100 Wilson Boulevard, Room 2350, Arlington VA 22209–3929.

Questions about the information collection requirements may be directed to the person listed in the FOR FURTHER INFORMATION CONTACT section of this notice.

III. Current Actions

The information obtained will be used to issue permits to mine operators or slope contractors for the use of nonpermissible explosives and/or shot-firing units. MSHA has used 2012 data for the number of respondents and responses, as well as the total burden hours and burden costs supporting this information collection request.

Type of Review: Extension.
Agency: Mine Safety and Health Administration.
Title: Application for a Permit to Fire More than 20 Boreholes and/or for the use of Nonpermissible Blasting Units, Explosives, and Shot-firing Units; Posting Notices of Misfires.
OMB Number: 1219–0025.
Affected Public: Business or other for-profit.

Total Number of Respondents: 67.
Total Number of Responses: 88.
Total Burden Hours: 74 hours.
Total Annual Respondent or Recordkeeper Cost Burden: $348.
Comments submitted in response to this notice will be summarized and included in the request for Office of Management and Budget approval of the information collection request; they will also become a matter of public record.
Dated: June 28, 2013.

George F. Triebisch,
Certifying Officer.

BIL meaningful use (4510–43–P)

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
[Notice 13–072]

National Environmental Policy Act; Sounding Rockets Program; Poker Flat Research Range

AGENCY: National Aeronautics and Space Administration (NASA).

ACTION: Notice of availability of the Final Environmental Impact Statement (FEIS) for the NASA Sounding Rockets Program (SRP) at Poker Flat Research Range (PFRR), Alaska.

SUMMARY: Pursuant to the National Environmental Policy Act, as amended, (NEPA) (42 U.S.C. 4321 et seq.), the Council on Environmental Quality Regulations for Implementing the Procedural Provisions of NEPA (40 CFR Parts 1500–1508), and NASA’s NEPA policy and procedures (14 CFR Part 1216, subpart 1216.3), NASA has prepared and issued a FEIS for its continued use of the University of Alaska Fairbanks (UAF) owned and managed PFRR, outside of Fairbanks, Alaska. The Bureau of Land Management (BLM), U.S. Fish and Wildlife Service (USFWS), and UAF have served as Cooperating Agencies in preparing the FEIS. The purpose of this notice is to apprise interested agencies, organizations, tribal governments, and individuals of the availability of the FEIS.

DATES: NASA will issue a Record of Decision (ROD) based on the FEIS no sooner than 30 days from the date of publication in the Federal Register of the U.S. Environmental Protection Agency’s Notice of Availability of the FEIS.

ADDRESSES: The FEIS may be reviewed at the following locations:
(a) ARLIS, 3211 Providence Drive, Anchorage, Alaska, 99508 (907–272–7547)
(b) Z.J. Loussac Public Library, 3600 Denali Street, Anchorage, Alaska, 99503 (907–343–2975)
(c) Elmer E. Rasmuson Library, 310 Tanana Loop, Fairbanks, Alaska, 99775 (907–474–7481)
(d) Noel Wien Library, 1215 Cowles Street, Fairbanks, Alaska 99701 (907–459–1020)
(f) NASA Headquarters Library, Room 120, 300 E Street SW., Washington, DC 20546–0001 (202–358–0168)

A limited number of hard copies of the FEIS are available, on a first request basis, by contacting Joshua Bundick, NASA Wallops Flight Facility, Mailstop: 250.W, Wallops Island, Virginia 23337; telephone at 757–824–2319; or electronic mail at Joshua.A.Bundick@nasa.gov. The FEIS is also available on the Internet in Adobe® portable document format at http://sites.wff.nasa.gov/code250/pfrr_eis.html.

NASA’s ROD will be made available, once issued, on the same Web site as above and by request to the contact provided above.

FOR FURTHER INFORMATION CONTACT:
Joshua Bundick, Manager, Poker Flat Research Range EIS, NASA Wallops Flight Facility, Mailstop: 250.W, Wallops Island, Virginia 23337; telephone: 757–824–2319; fax: 757–824–1819; electronic mail: Joshua.A.Bundick@nasa.gov. A toll-free telephone number, 800–521–3415, is also available for persons outside the local calling area. When using the toll-free number, please follow the menu options and enter the “pound sign (#)” followed by extension numbers “2319.”

Additional information about NASA’s SRP and UAF’s PFRR may be found on the Internet at http://sites.wff.nasa.gov/code810 and http://www.pfrr.alaska.edu, respectively.

Information regarding the NEPA process for this proposal and supporting documents (as available) are located at http://sites.wff.nasa.gov/code250/pfrr_eis.html.

SUPPLEMENTARY INFORMATION: Since the late 1960s, NASA, other government agencies, and educational institutions have conducted suborbital rocket launches from the PFRR. While the PFRR is owned and managed by the Geophysical Institute of UAF, the NASA SRP has exclusively funded and managed the support contract with PFRR for more than 25 years.
SUPPORTING STATEMENT

30 C.F.R §§ 75.1321, 75.1327, and 77.1909-1 - Applications for a permit to fire more than 20 boreholes and for the use of non-permissible blasting units or for the posting of notices of misfired holes (pertaining to underground coal mines) and the use of nonpermissible explosives and shotfiring units in shaft and slope construction (pertains to coal mining industry).

JUSTIFICATION

1. Explain the circumstances that make the collection of information necessary. Identify any legal or administrative requirements that necessitate the collection. Attach a copy of the appropriate section of each statute and regulation mandating or authorizing the collection of information.

Under Section 313 of the Federal Mine Safety and Health Act of 1977 (Mine Act), 30 U.S.C. § 873, any explosives used in underground coal mines must be permissible. The Mine Act also provides that, under safeguards prescribed by the Secretary of Labor, a mine operator may permit the firing of more than 20 shots and the use of nonpermissible explosives in sinking shafts and slopes from the surface in rock. Title 30 C.F.R. § 75.1321 outlines the procedures by which a permit may be issued for the firing of more than 20 boreholes and/or the use of nonpermissible shot-firing units in underground coal mines. In those instances in which there is a misfire of explosives, 30 C.F.R. § 75.1327 requires that a qualified person post each accessible entrance to the affected area with a warning to prohibit entry. Title 30 C.F.R. § 77.1909-1 outlines the procedures by which a coal mine operator may apply for a permit to use nonpermissible explosives and/or shot-firing units in the blasting of rock while sinking shafts or slopes for underground coal mines.

To obtain a permit, the mine operator files an application with the MSHA district manager in the district in which the mine is located. Applications may be mailed, emailed or faxed, using company letterhead stationery and should contain the name and address of the mine, the designated active workings in which the units will be used and the approximate number of shots to be fired, the period of time during which such units are to be used, the nature of the development or construction for which they will be used, a plan to protect miners, a statement of the specific hazards anticipated, and the method to be employed to avoid the dangers anticipated.

The district manager may permit the firing of more than 20 boreholes of permissible explosives in a round where he has determined that it is necessary to reduce the overall hazard to which miners are exposed during underground blasting. The district manager issues a permit to use nonpermissible items when he finds that a permissible shot-firing unit does not have adequate blasting capacity and the use of such permissible units will create development or construction hazards. As a condition of

January 2010
use, the district manager may include safeguards, in addition to those proposed by the operator, that he determines are necessary to protect the safety of the miners at the time the blasting is permitted.

2. Indicate how, by whom, and for what purpose the information is to be used. Except for a new collection, indicate the actual use the agency has made of the information received from the current collection.

MSHA uses the information requested to issue a permit to the mine operator for the use of nonpermissible explosives and/or shot-firing units. The permit informs mine management and the miners of the steps to be employed to protect the safety of any person exposed to such blasting while using nonpermissible items.

3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses, and the basis for the decision for adopting this means of collection. Also describe any consideration of using information technology to reduce burden.

No improved information technology has been identified that would reduce the burden. The applications to use nonpermissible blasting units, to fire more than 20 boreholes, or to use nonpermissible explosives and/or non-permissible blasting units in shaft or slope construction are narrative descriptions of the equipment and explosives to be used, the number and pattern of the boreholes to be fired, and the safety precautions to be employed. The applications may include schematics, tables, and drawings. Such narrative plans and simple graphics can be prepared using personal computers and word processing programs and submitted via email, where the mine operator has the capability of affixing transmittable authorization signatures, or where the email or facsimile is followed by a signed hard copy. Neither the use of nor absence of access to electronic media significantly affect the burden imposed by the standard.

4. Describe efforts to identify duplication. Show specifically why any similar information already available cannot be used or modified for use for the purposes described in Item 2 above.

There is no similar or duplicate information that could be used. Permits are issued on a mine-by-mine basis for the period specified by the district manager. As far as could be determined, no state agency or other party requires such permit approval.

5. If the collection of information impacts small businesses or other small entities (Item 5 of OMB Form 83-I), describe any methods used to minimize burden.

This information collection does not have a significant impact on small businesses or other small entities.

January 2010
6. Describe the consequence to Federal program or policy activities if the collection is not conducted or is conducted less frequently, as well as any technical or legal obstacles to reducing burden.

In the absence of this collection, or permits for blasting units, explosives and shot-firing units, the mine operator or shaft and slope contractors would be putting the miners at risk. There would be no guarantee that the mine operator would have a plan designed to ensure the protection of life and the prevention of injuries to the miners exposed to underground blasting. In addition, MSHA would be unable to enforce the requirements of the Federal Mine Safety and Health Act of 1977 as effectively without this collection.

7. Explain any special circumstances that would cause an information collection to be conducted in a manner:

   • requiring respondents to report information to the agency more often than quarterly;
   • requiring respondents to prepare a written response to a collection of information in fewer than 30 days after receipt of it;
   • requiring respondents to submit more than an original and two copies of any document;
   • requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records for more than three years;
   • in connection with a statistical survey, that is not designed to produce valid and reliable results that can be generalized to the universe of study;
   • requiring the use of a statistical data classification that has not been reviewed and approved by OMB;
   • that includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or which unnecessarily impedes sharing of data with other agencies for compatible confidential use; or
   • requiring respondents to submit proprietary trade secret, or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information's confidentiality to the extent permitted by law.

Permit applications, which contain all pertinent information, are submitted only one time at any given mine. There are no requirements for the respondent to report the ongoing or occasional use of the district manager-approved blasting plan, including the use of nonpermissible blasting units or the firing of more than 20 boreholes. Although a mine operator is not explicitly required to submit information more than once, revised applications do need to be submitted to MSHA any time the conditions outlined in item 6 of this statement occur. This collection of information is otherwise consistent with the guidelines in 5 C.F.R. § 1320.5.
8. If applicable, provide a copy and identify the data and page number of publication in the Federal Register of the agency's notice, required by 5 CFR 1320.8(d), soliciting comments on the information collection prior to submission to OMB. Summarize public comments received in response to that notice and describe actions taken by the agency in response to these comments. Specifically address comments received on cost and hour burden.

Describe efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported. Consultation with representatives of those from whom information is to be obtained or those who must compile records should occur at least once every 3 years -- even if the collection of information activity is the same as in prior periods. There may be circumstances that may preclude consultation in a specific situation. These circumstances should be explained.

In accordance with 5 C.F.R. § 1320.8(d), MSHA will publish the proposed information collection requirements in the Federal Register, notifying the public that these information collection requirements are being reviewed in accordance with the Paperwork Reduction Act of 1995 and giving interested persons 60 days to submit comments.

9. Explain any decision to provide any payment or gift to respondents, other than remuneration of contractors or grantees.

MSHA does not provide payments or gifts to respondents.

10. Describe any assurance of confidentiality provided to respondents and the basis for the assurance in statute, regulation, or agency policy.

There is no assurance of confidentiality provided to the respondents.

11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private. This justification should include the reasons why the agency considers the questions necessary, the specific uses to be made of the information, the explanation to be given to persons from whom the information is requested, and any steps to be taken to obtain their consent.

There are no questions of a sensitive nature.

12. Provide estimates of the hour burden of the collection of information. The statement should:

- Indicate the number of respondents, frequency of response, annual hour burden, and an explanation of how the burden was estimated. Unless directed to do so, agencies should not conduct special surveys to obtain information on which to base hour burden estimates. Consultation with a sample (fewer than 10) of potential respondents is desirable. If the hour burden on respondents is expected to vary widely because of differences in activity, size, or complexity, show the range of estimated hour burden, and explain the reasons for the variance. Generally, estimates should not include burden hours for customary and usual business practices.

January 2010
• If this request for approval covers more than one form, provide separate hour burden estimates for each form and aggregate the hour burdens in Item 13 of OMB Form 83-I.

• Provide estimates of annualized cost to respondents for the hour burdens for collections of information, identifying and using appropriate wage rate categories. The cost of contracting out or paying outside parties for information collection activities should not be included here. Instead, this cost should be included in Item 13.

Based on FY 2009 records, MSHA estimates that approximately 68 permit applications (51 under § 75.1321 and 17 under § 77.1909-1) will be received each year. MSHA safety specialists estimate that it would take a mine operator approximately one hour to prepare and submit a permit application:

\[ 68 \text{ applications} \times 1 \text{ hour/application} = 68 \text{ hours} \]

MSHA experience indicates that the permit applications are prepared by engineers and other technically trained persons. As such, MSHA estimates the cost per hour for preparation to be $73.26 (Salaries based on data from the U.S. Coal Mine Salaries, Wages, & Benefits - 2008 Hourly Wage Rates for Coal Mines):

\[ 68 \text{ hours} \times $73.26/\text{hour} = $4,981.68 \]

On occasion, the use of explosives may result in the misfire of some of those explosives. In such cases, a qualified person is required to post a conspicuous warning notice at the entrance to the affected area. The number of active mining units using explosives to break coal has declined from 42 in December 2006 to 24 in October 2009. MSHA correspondingly estimates that the number of misfired boreholes requiring notices has proportionally decreased. MSHA estimates that not more than 33 misfires occur each year and that it takes approximately 20 minutes (0.33 hours) to post a notice warning that a misfire that has not been disposed of is present. The 2008 Hourly Wage Rate for an underground coal miner is estimated to be $34.17 per hour.

\[ 33 \text{ notices} \times 0.33 \text{ hours/notice} = 11 \text{ hours} \]

\[ 11 \text{ hours} \times $34.17/\text{hour} = $375.87 \]

**Total Burden Hours = 79**

13. Provide an estimate of the total annual cost burden to respondents or recordkeepers resulting from the collection of information. (Do not include the cost of any hour burden shown in Items 12 and 14).

• The cost estimate should be split into two components: (a) a total capital and start-up cost component (annualized over its expected useful life); and (b) a total operation and maintenance and purchase of services component. The estimates should take into account costs associated with generating, maintaining, and disclosing or providing the information. Include descriptions of methods used to estimate major cost factors including system and

January 2010
technology acquisition, expected useful life of capital equipment, the discount rate(s), and the
time period over which costs will be incurred. Capital and start-up costs include, among other
items, preparations for collecting information such as purchasing computers and software;
monitoring, sampling, drilling and testing equipment; and record storage facilities.

- If cost estimates are expected to vary widely, agencies should present ranges of cost burdens
  and explain the reasons for the variance. The cost of purchasing or contracting out
  information collection services should be a part of this cost burden estimate. In developing
cost burden estimates, agencies may consult with a sample of respondents (fewer than 10),
utilize the 60-day pre-OMB submission public comment process and use existing economic or
regulatory impact analysis associated with the rulemaking containing the information
  collection, as appropriate.

- Generally, estimates should not include purchases of equipment or services, or portions
  thereof, made: (1) prior to October 1, 1995, (2) to achieve regulatory compliance with
  requirements not associated with the information collection, (3) for reasons other than to
  provide information or keep records for the government, or (4) as part of customary and usual
business or private practices.

MSHA estimates that the narrative and any tables, charts or drawing created for use in
the permit application can be produced on normal office equipment used in the
customary and usual course of business. Approximately 33 applications submitted by
email or fax only would not incur mailing costs. If applications are mailed, MSHA
estimates that the cost to mail each application is approximately $5.69.

\[
35 \text{ applications} \times \$5.69/\text{application} = \$199.15
\]

MSHA also estimates that the warning notice/sign of a misfire will be non-reusable,
pre-printed “danger/misfire” placards. The cost of such placards is estimated at
approximately $6.89 each.

\[
33 \text{ postings} \times \$6.89 = \$227.37
\]

**Total Burden Cost = $427**

14. Provide estimates of annualized cost to the Federal government. Also, provide a description of the
method used to estimate cost, which should include quantification of hours, operational expenses
(such as equipment, overhead, printing, and support staff), and any other expense that would not have
been incurred without this collection of information. Agencies also may aggregate cost estimates from
Items 12, 13, and 14 in a single table.

MSHA estimates that the review and preparation of a written response approving or
disapproving a permit application requires approximately four hours. Applications are
reviewed by MSHA technical specialists earning approximately $32.25 per hour (U.S.
Office of Personnel Management General Schedule FY 2010 wage rate for Coal Mine
Inspector GS-12/5).
68 applications x 4 hours = 272 hours
272 hours x $32.73/hour = $8,903

Cost to the Federal Government = $8,903

15. Explain the reasons for any program changes or adjustments reporting in Items 13 or 14 of the OMB Form 83-I.

Applications for permits increased from 50 to 68; a decrease in misfires requiring a placard be posted (from 57 to 33) corresponds to the decrease in the number of active mining units using explosives to break coal; responses decreased from 107 to 101. The number of burden hours increased from 69 to 79 due to the increase in applications for permits. The cost decreased from $635 to $427 due to more electronic submissions resulting in less postage cost.

16. for collections of information whose results will be published, outline plans for tabulation, and publication. Address any complex analytical techniques that will be used. Provide the time schedule for the entire project, including beginning and ending dates of the collection of information, completion of report, publication dates, and other actions.

MSHA does not intend to publish the results of this information collection.

17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons that display would be inappropriate.

MSHA is not seeking approval to either display or not display the expiration date for OMB approval of this information collection. There are no forms associated with this information collection on which to display an expiration date.

18. Explain each exception to the certification statement identified in Item 19, "Certification for Paperwork Reduction Act Submission," of OMB 83-I.

MSHA is not requesting an exception to the certification statement.
B. Collection of Information Employment Statistical Methods

The agency should be prepared to justify its decision not to use statistical methods in any case where such methods might reduce burden or improve accuracy of results. When Item 17 on the Form OMB 83-I is checked "Yes", the following documentation should be included in the Supporting Statement to the extent that it applies to the methods proposed:

1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection methods to be used. Data on the number of entities (e.g., establishments, State and local government units, households, or persons) in the universe covered by the collection and in the corresponding sample are to be provided in tabular form for the universe as a whole and for each of the strata in the proposed sample. Indicate expected response rates for the collection as a whole. If the collection had been conducted previously, include the actual response rate achieved during the last collection.

2. Describe the procedures for the collection of information including:
   • Statistical methodology for stratification and sample selection,
   • Estimation procedure,
   • Degree of accuracy needed for the purpose described in the justification,
   • Unusual problems requiring specialized sampling procedures, and
   • Any use of periodic (less frequently than annual) data collection cycles to reduce burden.

3. Describe methods to maximize response rates and to deal with issues of non-response. The accuracy and reliability of information collected must be shown to be adequate for intended uses. For collections based on sampling, a special justification must be provided for any collection that will not yield "reliable" data that can be generalized to the universe studied.

4. Describe any tests of procedures or methods to be undertaken. Testing is encouraged as an effective means of refining collections of information to minimize burden and improve utility. Tests must be approved if they call for answers to identical questions from 10 or more respondents. A proposed test or set of tests may be submitted for approval separately or in combination with the main collection of information.

5. Provide the name and telephone number of individuals consulted on statistical aspects of the design and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.

As statistical analysis is not required by the regulation, questions 1 through 5 do not apply.
