27. Description of Accident (include equipment involved, the exact location in the mine, and status of rescue and recovery operations):

On Saturday, May 14, 2011, at approximately 8:18 p.m., Richard L. Young, a 37-year old mechanic with at least 14 years mining experience was fatally injured while removing the counter weight from a Caterpillar 992 G End Loader. Two mechanics were preparing to remove the fuel tank and counter weight when the victim placed himself under the machine and started removing the 30 mm x 80 mm bolts holding the weight in place. The victim had successfully removed 14 of the 16 bolts. Upon starting to remove the next to last bolt, it appears that the last two remaining bolts failed and broke, allowing the 11,685 pound counter weight to fall, crushing the victim causing fatal injuries. No blocking or attempt to secure the counter weight was provided before removing the bolts.

The information provided in this notice is based on preliminary data ONLY and does not represent final determinations regarding the nature of the incident or conclusions regarding the cause of the accident.
