Laborers are exposed to more conveyor hazards than most other mine employees. Conveyors are often involved in many mining deaths and injuries. You can help yourself work safer. When near this machinery, watch for conveyor hazards and work safely.

Conveyors can grab you
... don’t get caught up.

**Working Smart**

- Lock out the conveyor power switch and tag it before you work on that conveyor.
- Align the belt from a safe place and only after you’re sure the conveyor can’t grab you.
- **Return idlers look safe, but they can hurt you.** Never try to fix or adjust them while the conveyor is running.
- Conveyor **stop cords** are for your safety. Check them periodically to make sure they actually work.
Use a harness or safety belt and line when working where there is a danger of falling from a conveyor.

A clean walkway means a safer walk.

A conveyor is running.

Do not manually apply belt dressing.

Do not clean running conveyor pulleys.

Do not try to dislodge rocks from pulleys while the conveyor is running.

Do not use a shovel, hoe, or other hand tool to clean material build-up from a conveyor if the conveyor is running.

Do not clean running conveyor pulleys.

If the belt is in motion, do not manually apply belt dressing. Only pressurized dressings can be applied while the conveyor is running.

Conveyors only at crossovers. Keep conveyor walkways clear. Cross at crossovers.

Use a harness or safety belt and line when working where there is a danger of falling from a conveyor.
