### Sealing Edges

- Demand Valve Assembly
- Moisture Pads
- PCM

### Carbon Dioxide Scrubber

- Defects / Damage
- Gasket
- Expiration Date

### Center Section Lid Assembly

- Examine for defects / damage

### Sealing Edges

- Ice Canisters
- Coolant Lids

### Cylinder Test

- Hydrostatic Test Date
- Cylinder Pressure on Gauge
- Pressure Rating on Cylinder

### Hose

- Sealing Edges
- Stretching of hoses for pliability

### Adapter Assy

- O-ring damage & lubrication

### Face Piece Test

- Head Strap Assembly
- Mask Body / Nose Cup
- Sealing Edges
- Speech Diaphragms
- Lens / Anti-Fog Insert
- Magnetic Wiper
BIO-PAK 240-R
VISUAL APPARATUS (BREAK DOWN)

Upper Housing Assembly - Removed
Hoses - Removed
Coolant Lids and Ice Canisters - Removed
Center Section Lid Assembly - Removed
Moisture Pads - Removed
Carbon Dioxide Scrubbers and Gasket - Removed
PCM Canister - Removed
Loosen (But do not remove) Flow Restrictor
Center Section - Removed
Diaphragm and worm gear - Removed
Vent Valve Assembly - Removed as a unit
Oxygen Cylinder - Removed

Leak Check Adapter Fitting
Flow Test Fixture
Test Key
Vent Valve Hand Wrench
Center Section Pneumatic Plug
Regulator Wash Cover
Combination Pick Tool
#00 Phillips Head Screwdriver
#1 Phillips Head Screwdriver
#2 Phillips Head Screwdriver
1/4” Hex Driver
3/16” Nut Driver
5/16” Nut Driver
9/32” Nut Driver
3/8” x 5/16” Open End Wrench
7/16” Combination Wrench
1/2” Combination Wrench
5/8” x 9/16” Open End Wrench
Stop Watch
Bypass Valve Tool
STATEMENT TO BENCH CONTESTANT

The bench participant will be provided with two Bio-Pak 240-R apparatus (one disassembled, one assembled), a stopwatch, leak detector fluid, test kit, and tool kit. Only the tools and fluid provided will be used for testing and assembly of the apparatus. The work at the bench will consist of:

1. A visual examination of a disassembled Bio-Pak 240-R and the proper assembly and preparation for use in rescue work. This will include correcting any predetermined problem(s) so that the apparatus is in proper working order. Simulating defogging of the facepiece lens will be done as a part of the visual examination. This visual examination, correcting predetermined problem(s), and proper assembly can be done at any time allowed for the working of the problem.

2. Test the assembled Bio-Pak 240-R apparatus with a tester, and correct the predetermined problem(s) so that the apparatus is in proper working condition. Except for removing the facepiece storage plug from the breathing hoses, the assembled Bio-Pak 240-R apparatus cannot be disassembled to look for problems, until the apparatus fails a test. When testing is completed on the assembled Bio-Pak 240-R apparatus, the hoses shall be removed from the tester, connected to the facepiece, and the upper housing installed. This shall be done before the clock is stopped.

When an unplanned deficiency is encountered in the apparatus, the participant will be notified by the judge(s) that the deficiency is not part of the problem. The judge will stop the clock and any time used to correct the deficiency will not be charged to the working time.

A maximum of 30 minutes will be allowed to complete the problem. The judge will tell you when 25 minutes has passed. At the completion of the problem, the judge(s) and the participant will note the working time of the problem with the official timekeeper. Work done after the clock is stopped will not be recognized.
