Part 56.20008 states: Toilet facilities shall be provided at locations that are compatible with the mine operations and are readily accessible to mine personal.

This should be changed. A lot of small open pit mine operators have several pits that they have open with in a 5 to 10 mile area and have to have a portable toilet at each location or within 1/2 mile of the location. When was the last time you drove down the interstate and had toilet facilities every 1/2 mile. This costs the small mine operator and his contractors a lot of money each year
