---

I think reducing dust exposure for our employees by the use of CDPM's is a great tool but I think the number of samples being required for each entity should be reduced from 15 to 10 each quarter. Also I would like to see the standard change that would allow operators to run the CDPM on the miners, bolters, shuttle car samples at the same time during the quarter. That would allow operators to better comply with the law to get all samples submitted during the quarter because of meeting the 30 shift production average and voided samples increases from 8 shifts to sometimes taking up to 2 weeks to get the sampling cycle completed.
