---

The entire 30 CFR should be repealed. The state agencies should handle it. The states without agencies can develop their own. If the entire regulation is not repealed, then Arlington (specifically MSHA's headquarters) should be repealed and NO new regulations should be developed. We don't need them. Allow the districts to have one liaison per district with the DOL to get their directives from the executive.

We averaged one red zone fatality per year before proximity on continuous miners and we are averaging one red zone fatality per year after proximity on continuous miners because the technology is not good enough to prevent the tampering. Just like everything else MSHA does.....who cares about cost or effectiveness.....just ram it through.

Just like Refuge Alternatives....WASTE

Just like PDMs.....WASTE

ETC.

ETC.
