27. Description of Accident (include equipment involved, the exact location in the mine, and status of rescue and recovery operations):
 On June 14, 2014, Kevin Lee Ames, a 35-year-old laborer, was using a propane torch to shrink-wrap pelletized gypsum when he received serious burns on 35% of his body. He was subsequently discovered by a co-worker and transported to a hospital. He died on July 28, 2014. The death certificate indicated that the cause of death was mucormycosis (fungal infection) due to burns, and that the manner of death was an accident. An autopsy was not performed. Based on the findings of the death certificate and the MSHA investigation, the Fatality Review Committee determined that the death should be charged to the mining industry.

The information provided in this notice is based on preliminary data ONLY and does not represent final determinations regarding the nature of the incident or conclusions regarding the cause of the accident.
